

## What can we do?

Ask your representatives to **advocate** for real climate protection.

Register of representatives:  
[www.bundestag.de/abgeordnete](http://www.bundestag.de/abgeordnete)

Live a more **climate friendly** lifestyle

More information:  
[www.umweltbundesamt.de/themen/klima-neutral-leben-im-alltag](http://www.umweltbundesamt.de/themen/klima-neutral-leben-im-alltag)

**Become active** in the climate movement

Find your group:

# Sustainable prevention of pandemics

Create a future worth living

### Global warming

## Reach Paris agreement goal of 1.5°C

Temperatures are rising due to the climate crisis. As a result creatures that carry pathogens dangerous to humans can spread out. Also, diseases transmitted by e.g. mosquitoes such as Malaria are becoming more likely to occur in our latitudes.

→ Ask your representatives to advocate for real climate protection.

### Permafrost areas

## Preserve regions of permanent frost

In northern Russia, Alaska and other areas, creatures have been frozen for thousands of years. They thaw with global warming and release ancient pathogens that can spread.

→ Become active in the climate movement

## Why more pandemics are likely to occur

Most scientists expect further global waves of disease in the years to come. The reasons for this - and what needs to change - are well known.

Destruction of habitats

Factory farming

# Pandemics

Thawing of permafrost soils

Global warming

## Climate crisis, species extinction and pandemics have the same underlying causes!

An important reason for fighting against the climate crisis is to prevent further pandemics. We must combat species extinction in order to protect our own species.

### Preserve ecosystems

## Leave untouched habitat for wildlife

As humans spread into pristine habitats such as rainforests, there is more contact to wild animals and their viruses. These can then be transmitted to humans.

- Pay attention to where food comes from
- Reduce the use of resources and buy consciously

### Meat production

## End mass animal farming

Huge groups of animals in a confined space favor mutation of pathogens and their transmissibility.

→ Eat healthy and consider the origin of your food  
<300g meat/week (EAT-Lancet Commission)
